User journey 1: at the counter

The associate serves the customer in person · SRS v2: UC1 to UC4

R1			
	Manual re-keying: ~12 min per list (estimate)	Shift-dependent advice, lost sales	Fragmented systems: one standard order

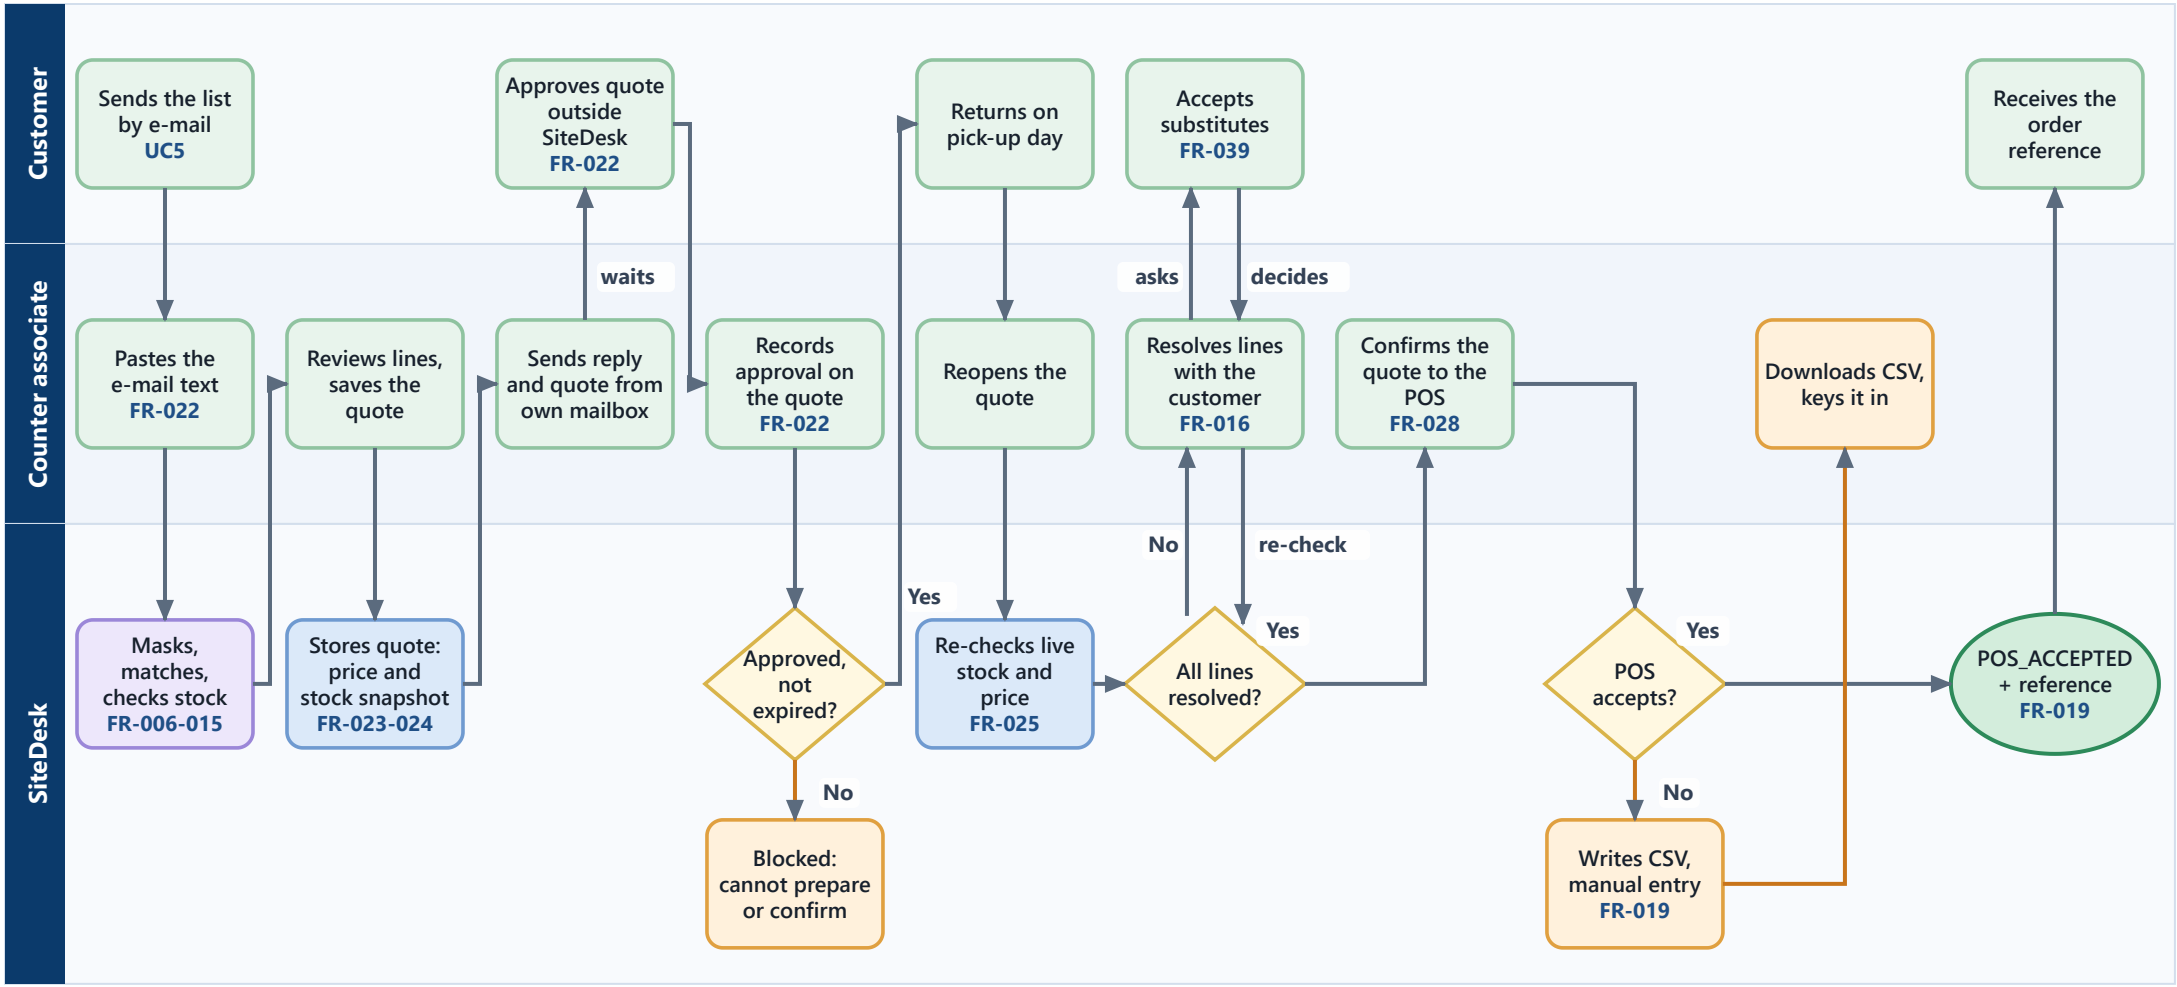

READING THE FLOW

Amber means an exception or fallback. Confirm stays blocked while any line is unresolved. If the AI is off, a rules-only match runs. If the POS refuses (503 or timeout), a CSV is written and the status is NEEDS_MANUAL, never POS_ACCEPTED.

AI-assisted · Hard rules · Human · Exception or fallback · Decision (diamond) · R1 = Round 1 problem · FR = requirement in the team's SRS v2

User journey 2: e-mail request to pick-up

The customer is not at the counter · SRS v2: UC5

R1				
	Manual re-keying of e-mails	Customers wait for answers	Stock changes before pick-up cause wrong picks	Fragmented systems: one standard order

READING THE FLOW

SiteDesk drafts the reply but sends no e-mail. Nothing is reserved between quote and pick-up, so the live re-check decides what can be promised. An e-mail request cannot be confirmed without its quote, and an order cannot be prepared without a recorded customer approval.

AI-assisted · Hard rules · Human · Exception or fallback · Decision (diamond) · R1 = Round 1 problem · FR = requirement in the team's SRS v2
