SiteDesk MVP: system context (C4 level 1)

Who uses SiteDesk, which systems sit outside it, and what is exchanged. SRS v2 §3, §7.

MVP SCOPE

Sign-in is simulated inside SiteDesk (not SSO).
Embeddings run locally; the LLM is optional.
Prices, stock and customers come from mock-pos.

DATA LIMIT

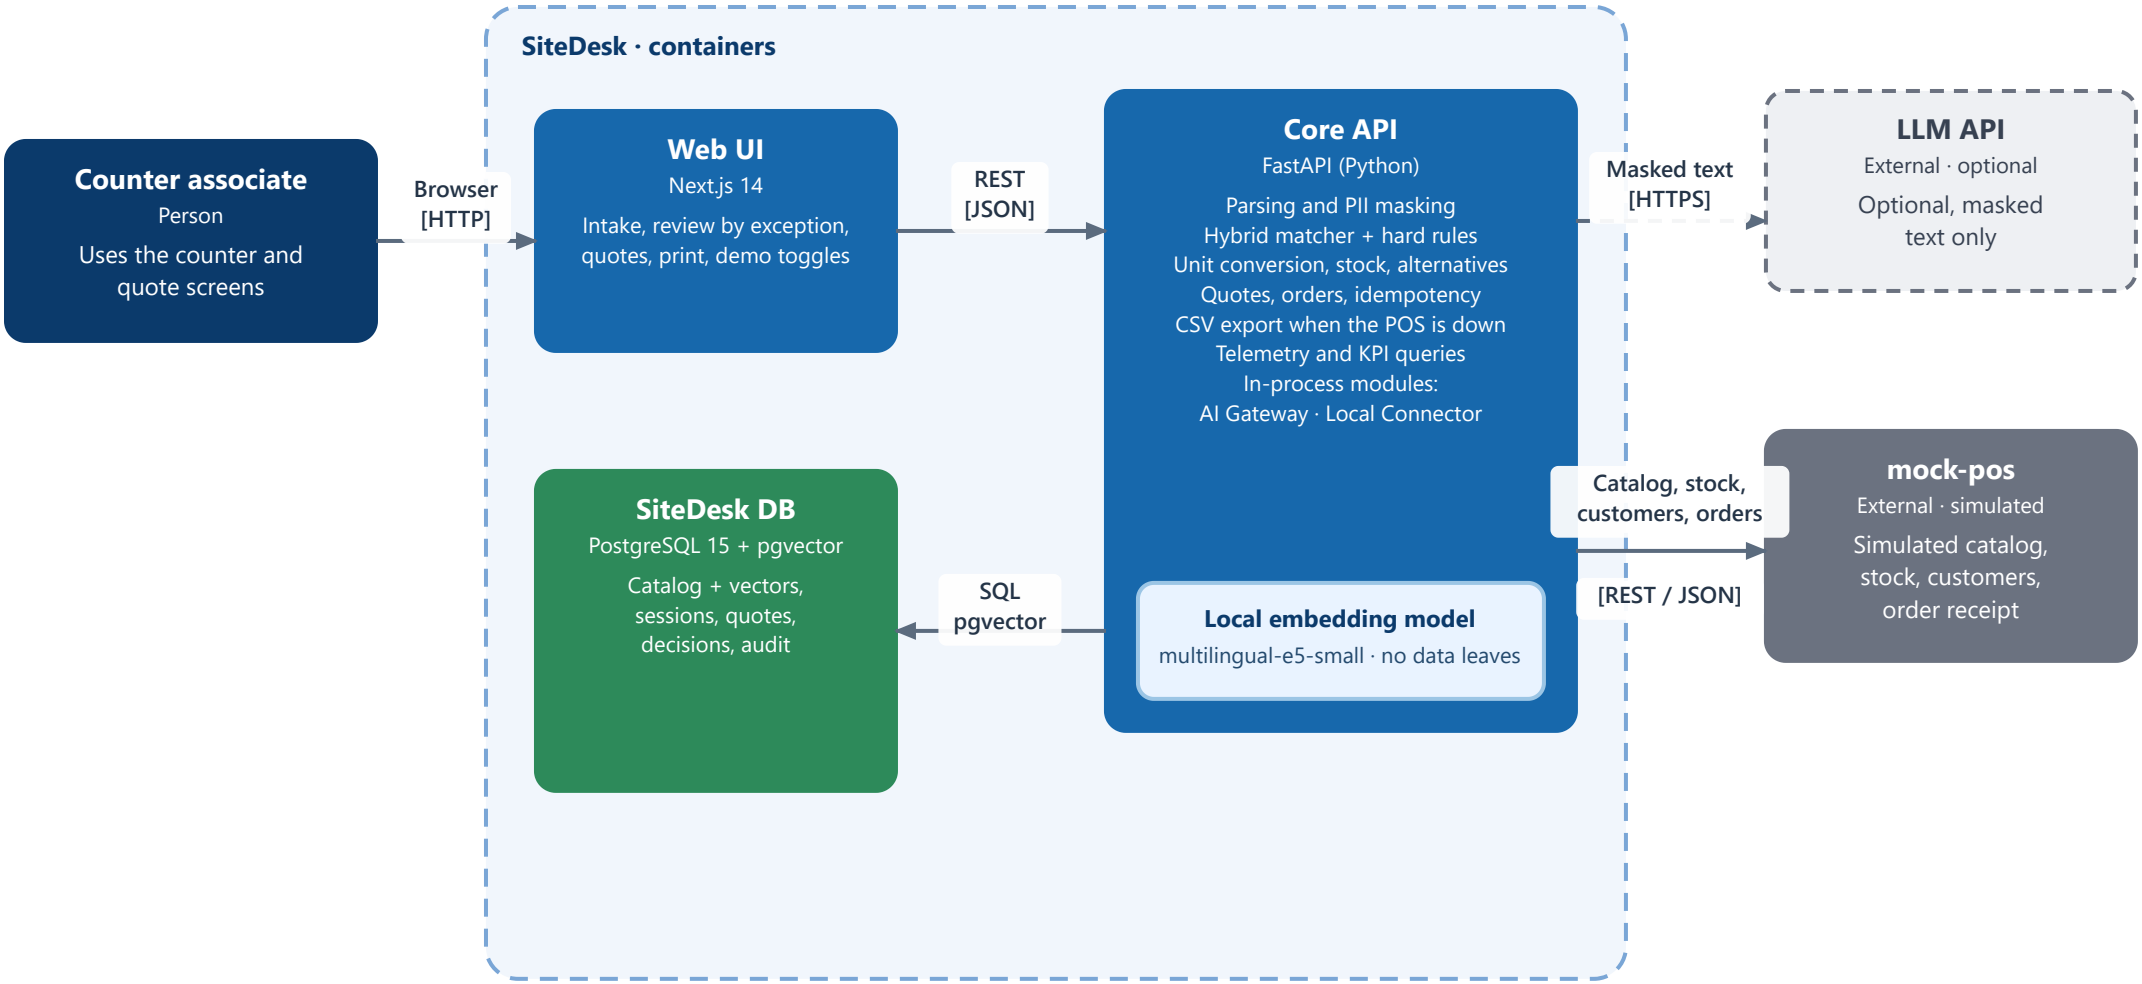

A regex masks e-mail addresses and phone numbers before any AI call. Names, addresses and other personal data in free text are not guaranteed removed.

OUTCOME

POS accepts: POS_ACCEPTED + reference.
POS 503 / timeout: CSV, NEEDS_MANUAL; the POS has not accepted the order.

SiteDesk MVP: containers (C4 level 2)

Deployable parts and the data store, and how they talk to each other and to the outside. Run locally with Docker Compose.

CONTAINER RULE

The AI Gateway and the Local Connector are in-process modules of the FastAPI core, not separate containers.
The vector index lives inside PostgreSQL (pgvector).

AI AND PRIVACY

Matching runs on local embeddings plus hard rules, so the AI path needs no external service.
The LLM, when enabled, only sees masked text.

FALLBACK

POS 503 / timeout: the connector writes a CSV and the order is marked NEEDS_MANUAL, not POS_ACCEPTED.
AI off: rules and manual catalog search continue.
